

BVX-200 Fume Extraction System Adds Three New Enhancements

OK International has upgraded the **BVX-200 Series** Fume Extraction Systems with the following three new features:

Remote Power Switch

Typically, users locate the BVX-200 under a workbench, sometimes making it difficult to switch the system "On" and "Off". A new Remote Power Switch, about the size of computer mouse, is now included with every system making it easy to switch the BVX System "On" or "Off".

Low Air-Flow Alarm

To improve efficiency, the BVX-200 series now features a new Low Air-Flow Alarm. Should the filters become clogged an audible alarm sounds, alerting users that a filter change is recommended to restore efficient operation.

Brushless Motor

All BVX-200 Series Systems are now powered by a brushless motor. This means that users can expect exceptional product life and reliability. Other key features and benefits of the new brushless motor include:

- Higher motor torque improving extraction performance.
- Reduction of both electrical noise and RF interference.

All of the new enhancements are included at no extra cost.

Availability

- The BVX-200 Series enhanced units will be available from October 2007.
- All systems starting with Serial Number 205000 or higher will contain the new brushless motor and remote on/off power switch.
- All systems starting with Serial Number 205106 will have the brushless motor, remote power switch and low- air-flow alarm.

Note: the remote power switch and low air flow alarm upgrades are integral to the product and can not be retrofitted.
